16TH NOVEMBER 7GMT-13.00 GMT

17TH NOVEMBER 7GMT-13.00 GMT

18TH NOVEMBER 7.00-11.15 GMT

Location:

Virtual

General Information:

Much of Africa's rapid urban growth is happening in towns and secondary cities that drive social and economic transformation. These secondary cities, struggle to accommodate this rapid expansion, with many migrants moving to informal areas that are prone to a various environmental hazards. Building resilience in these secondary cities is important for achieving country-level development objectives. It is in the backdrop of this that the Architectural Association of Kenya with support of the International Union of Architects and International Federation of Landscape Architects (IFLA) will be holding a virtual Urban Thinkers Campus based on the theme **Designing a Multi-Hazard Resilient City** with specific reference to Mombasa City as a case study.

The campus herein is intended to provide a platform for discussions relating to the need for urban resilience and fulfillment of the SDG goals and realization of the objectives of the New Urban Agenda. The primary of objectives of the campus include among others establishing an understanding of the challenges of a sustainable and resilient urban development.
